

Multipage Design

Repository: tssgTech.git

Date:

Brief Website Description:

Donna S. put together a quick web site for discussion and review.

Display includes existing graphics from years ago. Multipage design rather than singlepage that allows for scrolling through each group content.

Version Summary:

Used bootstrap 3.3.7

jquery 3.2.1

Brief Code Flow Description:

Header navbar, defined in default.htm, has tabs defined in header to click on and loads distinct page files for each group.

Directory Structure:

/tssgTechPoc

DataAnalytics.htm

Mobile.htm

/Images

/Styles/

styles.css

stylesRD.css

WeeklySchedule.htm

default.htm

Management.htm

SQA.htm

Web.htm

Code snippets:

Minimal javascript. Functions in default.htm. **Does not appear to be called.**

```
$(document).ready(function(){
```

```
$(window).scroll(function() {
```

The positive and negative observations

Pros:

1. excellent as a conversation piece for future development and design;
2. quick and simple to throw together;
3. included bootstrap (used carousel, jumbotron, navbar features) to encourage responsiveness and quick development;

Cons:

1. graphics not clickable and block responsive design;
2. html files mixed with css and javascript;
3. styles copied and included across all html files;
4. no icons;
5. needs text content/spelling cleanup;
