

Webflow Test Experiment

Webflow Test Experiment

As a TSSG Web Development team member, I want to experiment with code-level editing of HTML, CSS and JavaScript files exported from Webflow, so that I can determine if this is a good direction for TSSG Web Development team.

I know I am done when:

- The HTML, CSS and JavaScript files pass accepted QA TSSG norms
- The final process is acceptable to the learning and sharing norms of TSSG

The Web Team will accepted this when:

- Files are placed on TSSG's server and we have determined the ease of editing, deleting and copy-pasting within a code editor.
- Experimentation with copying code from one TSSG Group section and pasting code to edit for creation of a new TSSG group is performed (A need likely to emerge when new members join with expertise from other tech sectors such as Cyber Security and IoT).
- Ease of working with Webflow files is determined and reported to the Web Development team.
- The team has enough information to decide if building out the core layout, styling and interactions on Webflow will provide editable files that TSSG can manipulate in the future without need of a Webflow subscription.

TWS-157 - Jira project doesn't exist or you don't have permission to view it.
