

2020-01-18 Geb and Spock Workshop 63 Meeting notes

Date

18 Jan 2020

Attendees

- Brett Bosworth
- [Candy O'Sullivan \(Sutherland\)](#)
- [Jim Turner](#)
- [Joel Sharasheff](#)
- Paul Scheidmantel
- [Tyler Putnam](#)

Goals

- Add more Geb and Spock Tests.
- Integrate Xray test cases and reports.
- Ensure executing reportSnaps work with Linux and Windoze.

Discussion items

Time	Item	Who	Notes
10-10:45	TSSG On-Boarding	Jim Turner	TSSG Overview (Macro-view) : Brett Bosworth on Boarding Team Projects, Docker/M.E.A.N. Application/... Hardware... Confluence... Jira...
10:45-11:15	TSSG On-Boarding	Paul S.	In the weeds (micro-view) with Angular, Node.js, Mongo DB, Mongo Express,...
11:15 - Noon	TSSG Deployment	Jim T and Paul S.	Discussion of deploying ScheduleDB now versus later.

Action items

1. Tyler - Let's pencil in Saturday night 7 - 9 for the next meeting?
2. Jim T. - Things to Find out from Ralph for the DevOp piece for deployment;
Joel - (typing for Jim; I think Jim wanted to know the status of having a Jenkins deploy of Paul's Mongo db UI to a docker container for group access on a server - all packed in the scheduledb deploy?)
For the rest of the meeting, Paul walked through the current TSSG and web-flow code to revisit the changes that would be necessary to 'talk' to Mongo. Modifications to 1 tssg.tech file (scheduleDates.js) and 2 files (schedule.html, index.html) for the web-flow site (maybe add storage to Mongo of the Web-flow full-page 'pictures').
3. Joel - Will we ever drop the need to update the Confluence meeting schedule page? Or do we need a place to keep small, specific notes related to scheduling (e.g., reason for a delay in scheduling a date, a library is unavailable for that Wednesday, ...)?
